

BODY SENSORS FOR THE FUTURE OF MEDICINE

WILL YOU STILL NEED YOUR DOCTOR?

hSITE Annual Meeting | Montreal | 4-5 June 2012

JULIEN PENDERS
Program Manager Body Area Networks
imec / Holst Centre

**What will the doctor of
the future look like?**

Managing STRESS

30-40%

Report their job as stressful
(US)

\$42-300B

Cost associated to stress-
related disorders (US)

40M

Affected by work related
stress (EU)

4/10

Leading causes of death
directly related to stress

25%

Extended sickness absence
are related to stress (EU)

3/10

Leading causes of death
indirectly related to stress

STRESS TREATMENT TODAY

TREATMENT today is about reducing the SYMPTOMS through Antidepressant DRUGS

or

semi-empirically by COUNSELING (stress therapy)

STRESS MANAGEMENT TOMORROW

A smart phone app that reduces stress?

IT STARTS WITH MEASURING STRESS

By monitoring the Autonomic Nervous System

The ANS system

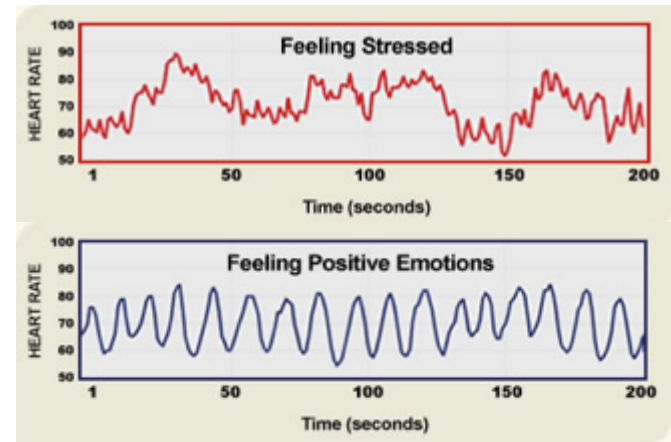

- ▶ Is responsible for maintaining homeostasis in the body
- ▶ Helps people adapt to changes in their environment
- ▶ Adjusts or modifies some functions in response to stress
- ▶ Is an unconscious control mechanism

The ANS affects regulation of

- ▶ heart rate, respiration rate, salivation, perspiration, diameter of the pupils

MONITORING STRESS

HeartMath's emWave

EXM O V E R E

affectiva.

MONITORING STRESS

K.Hook
Swedish Institute of Computer Science

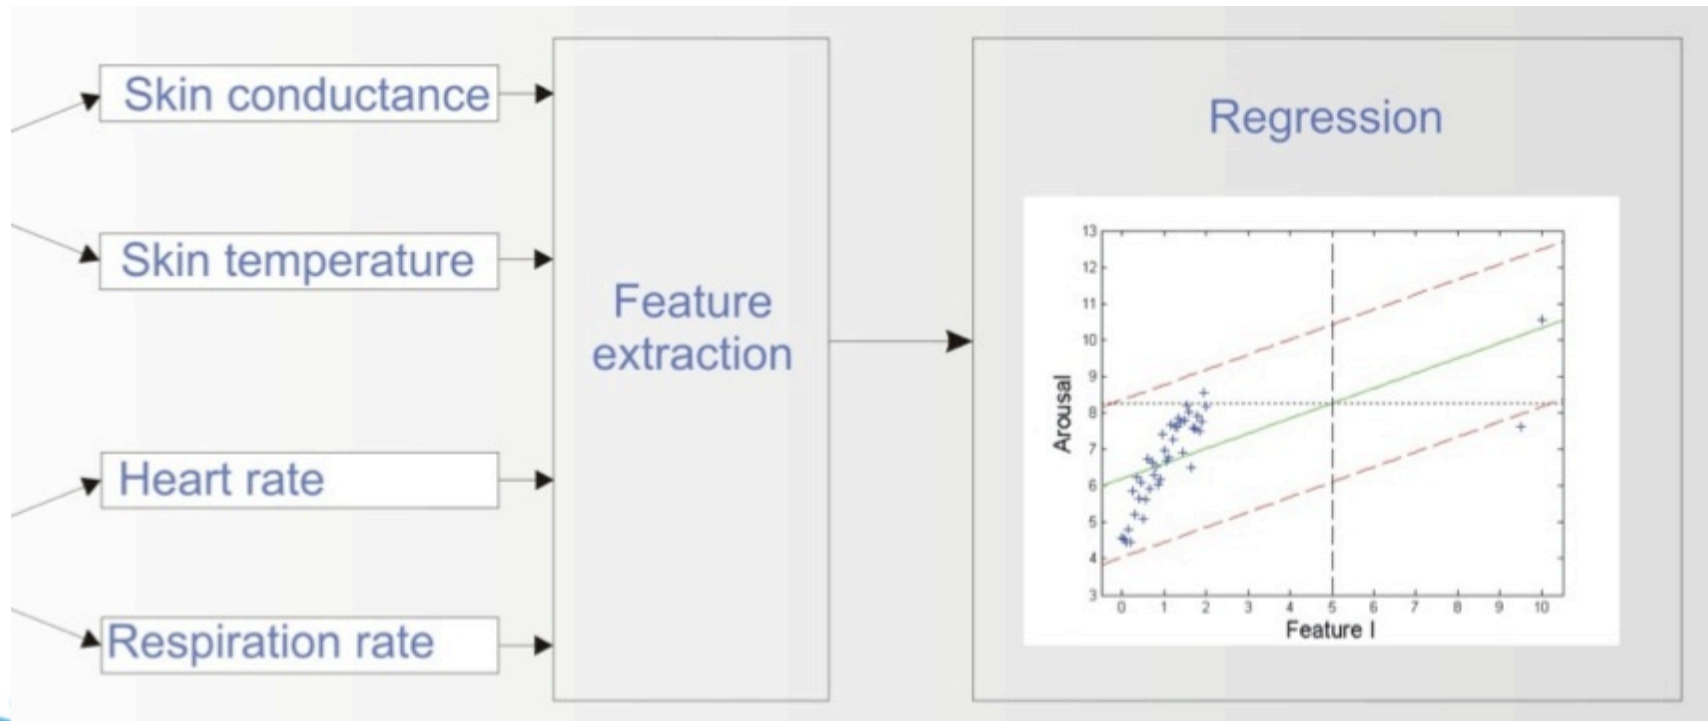

ANS MONITORING AT IMEC

REAL-TIME AROUSAL MONITORING

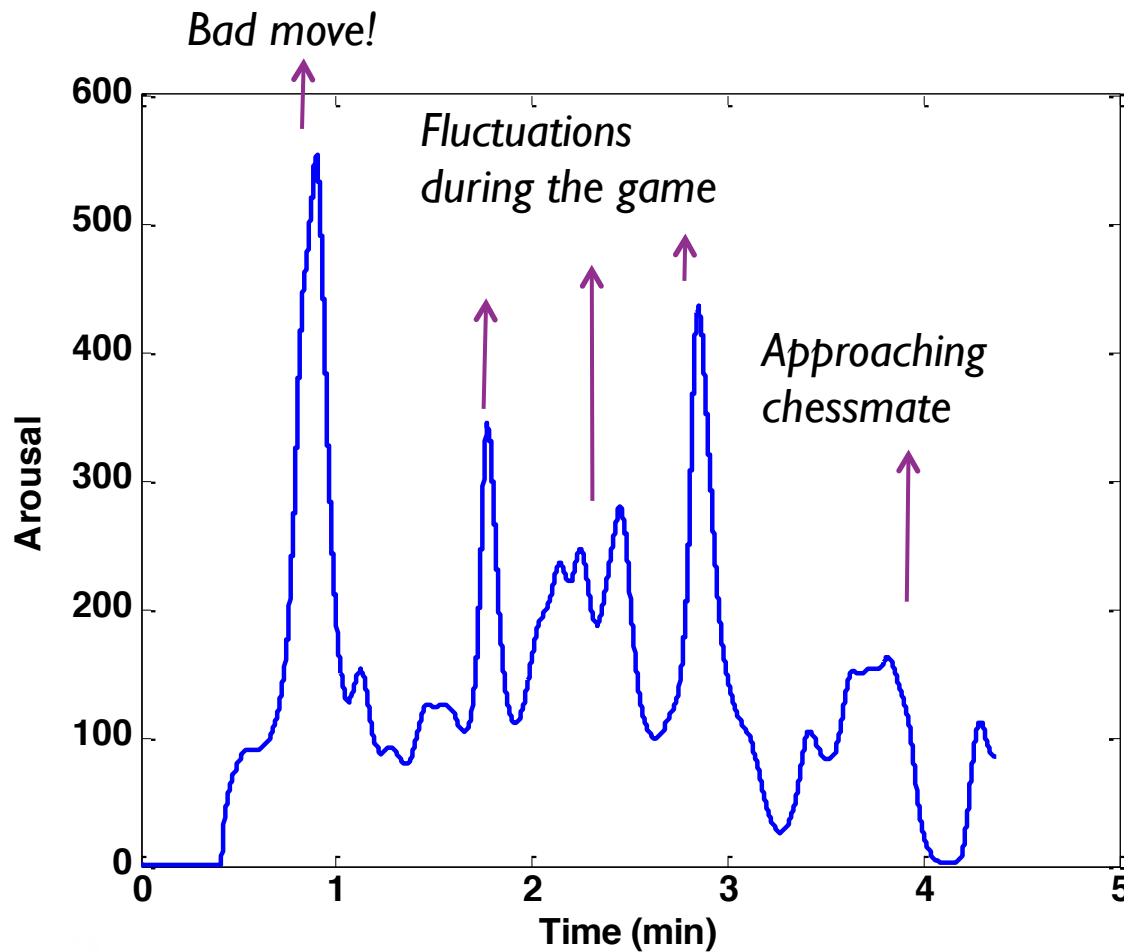

Extracting arousal from physiological responses

- ▶ Data processing with real-time sensor fusion and pattern recognition
- ▶ Real-time feature extraction from physiological signals
- ▶ Regression analysis combines the features into an estimation of *arousal*

REAL-TIME AROUSAL MONITORING

Use-case: chess players

Can we gauge the arousal of a chess player?

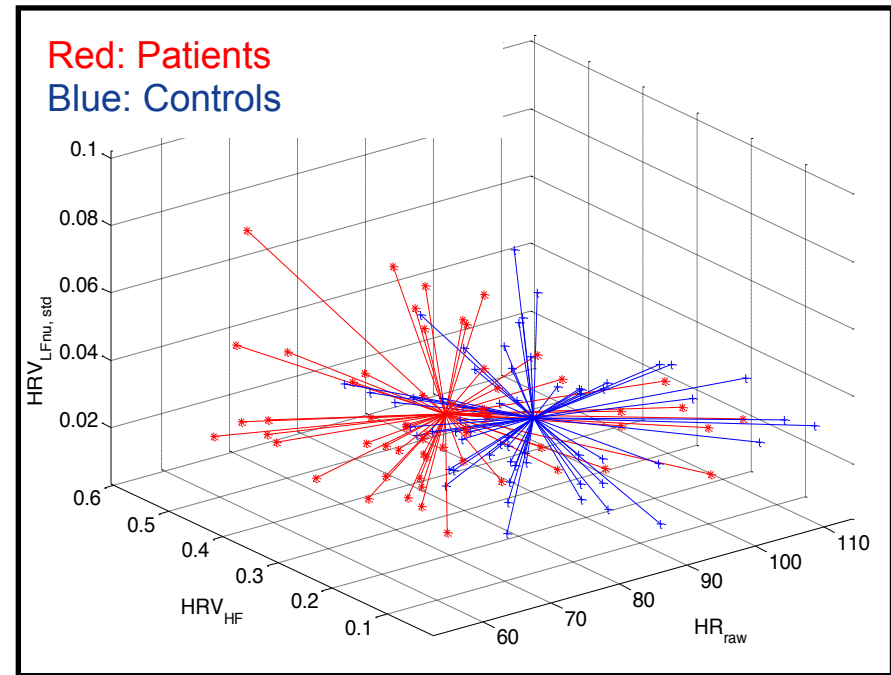

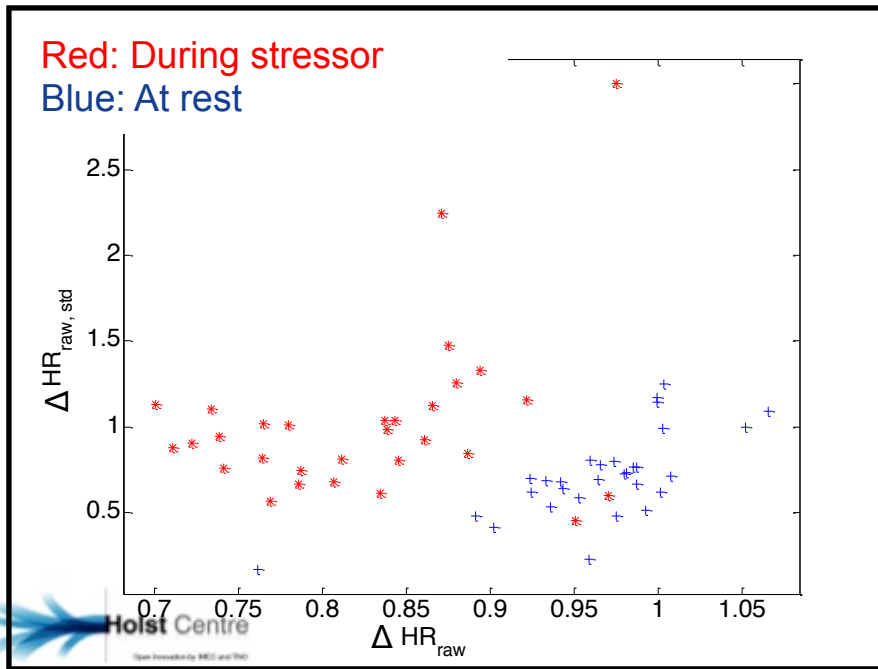

- ▶ Test game against a computer
- ▶ Player commenting his game afterwards

FROM AROUSAL TO STRESS MONITORING

ANS as a predictor for stress?

Stress can be detected using ANS responses. Data shows that **heart rate solely** leads to an estimated **classification error of 10%**

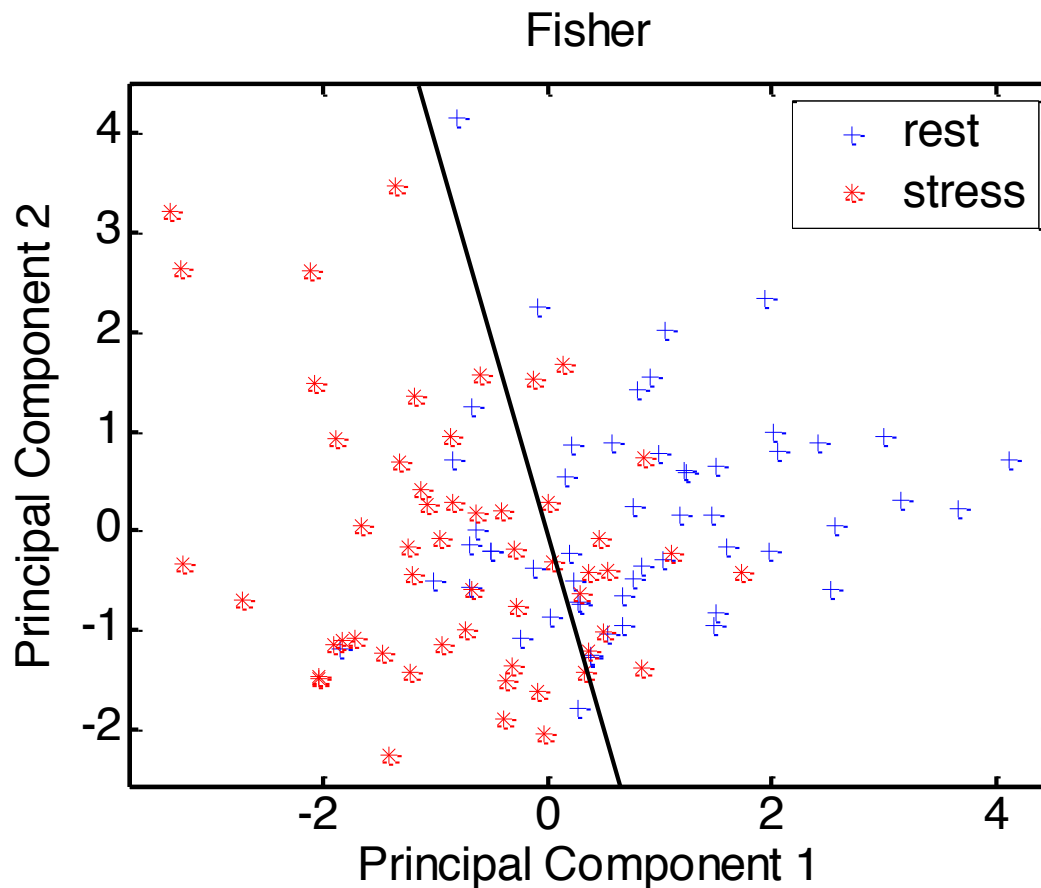

Comparing patients and healthy subjects may provide **new tools for assisting diagnosis** of stress disorders

Grundlehner et al, IEEE TITB (submitted)

MEASURING STRESS @ WORK?

- ▶ 9 features selected based on literature and physiological knowledge
- ▶ Results show near 80% accuracy in differentiating between stress and rest conditions

Classifier	Error rate (std)
Linear Bayes Normal	0.2167 (0.0250)
Quadratic Bayes Normal	0.2222 (0.0207)
K-Nearest Neighbor	0.2370 (0.0168)
Fisher's Least Square	0.2074 (0.0140)

Wijsman et al, EMBC 2011

IN THE FUTURE:
**CORTISOL
SENSOR**

Is managing stress of a few people the most important problem?

**Or is it about managing
the HEALTH of
BILLIONS of people**

**The patient of the
future is a
HEALTHY patient**

**And medicine will be
about
MANAGING HEALTH**

Stay FIT and LEAN

31%

Adults aged 15 and over are
insufficiently active

1B

Overweight people

3.2M

Deaths each year linked to
insufficient physical activity

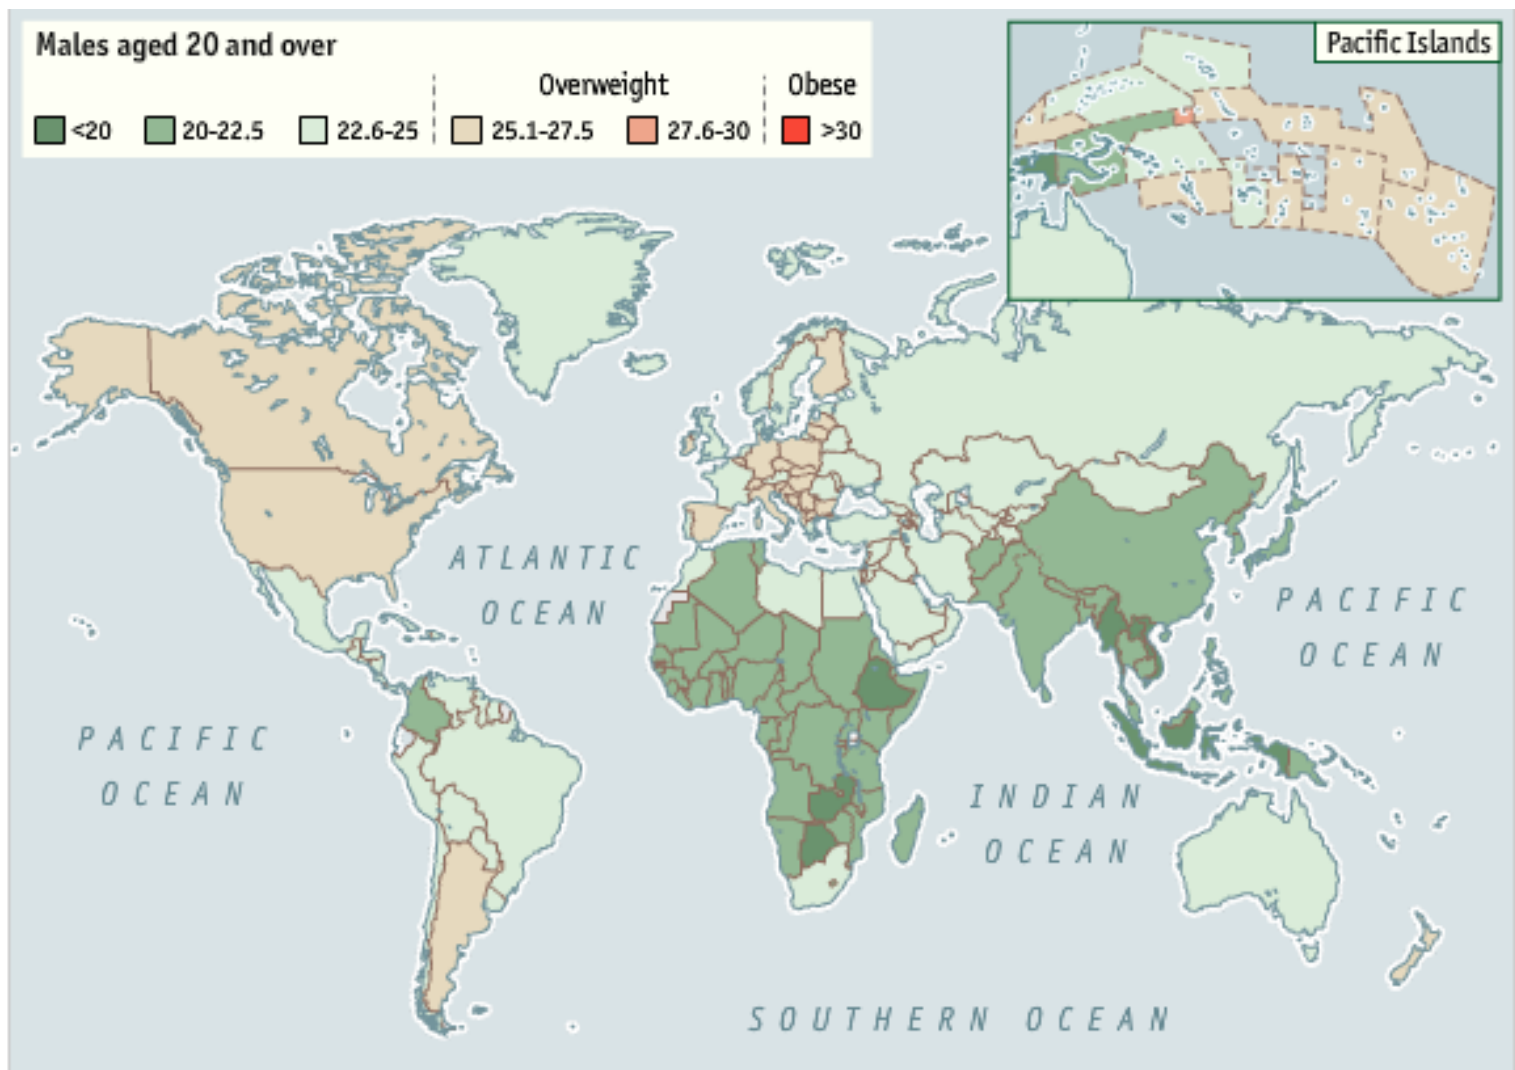

300M

Obese people worldwide

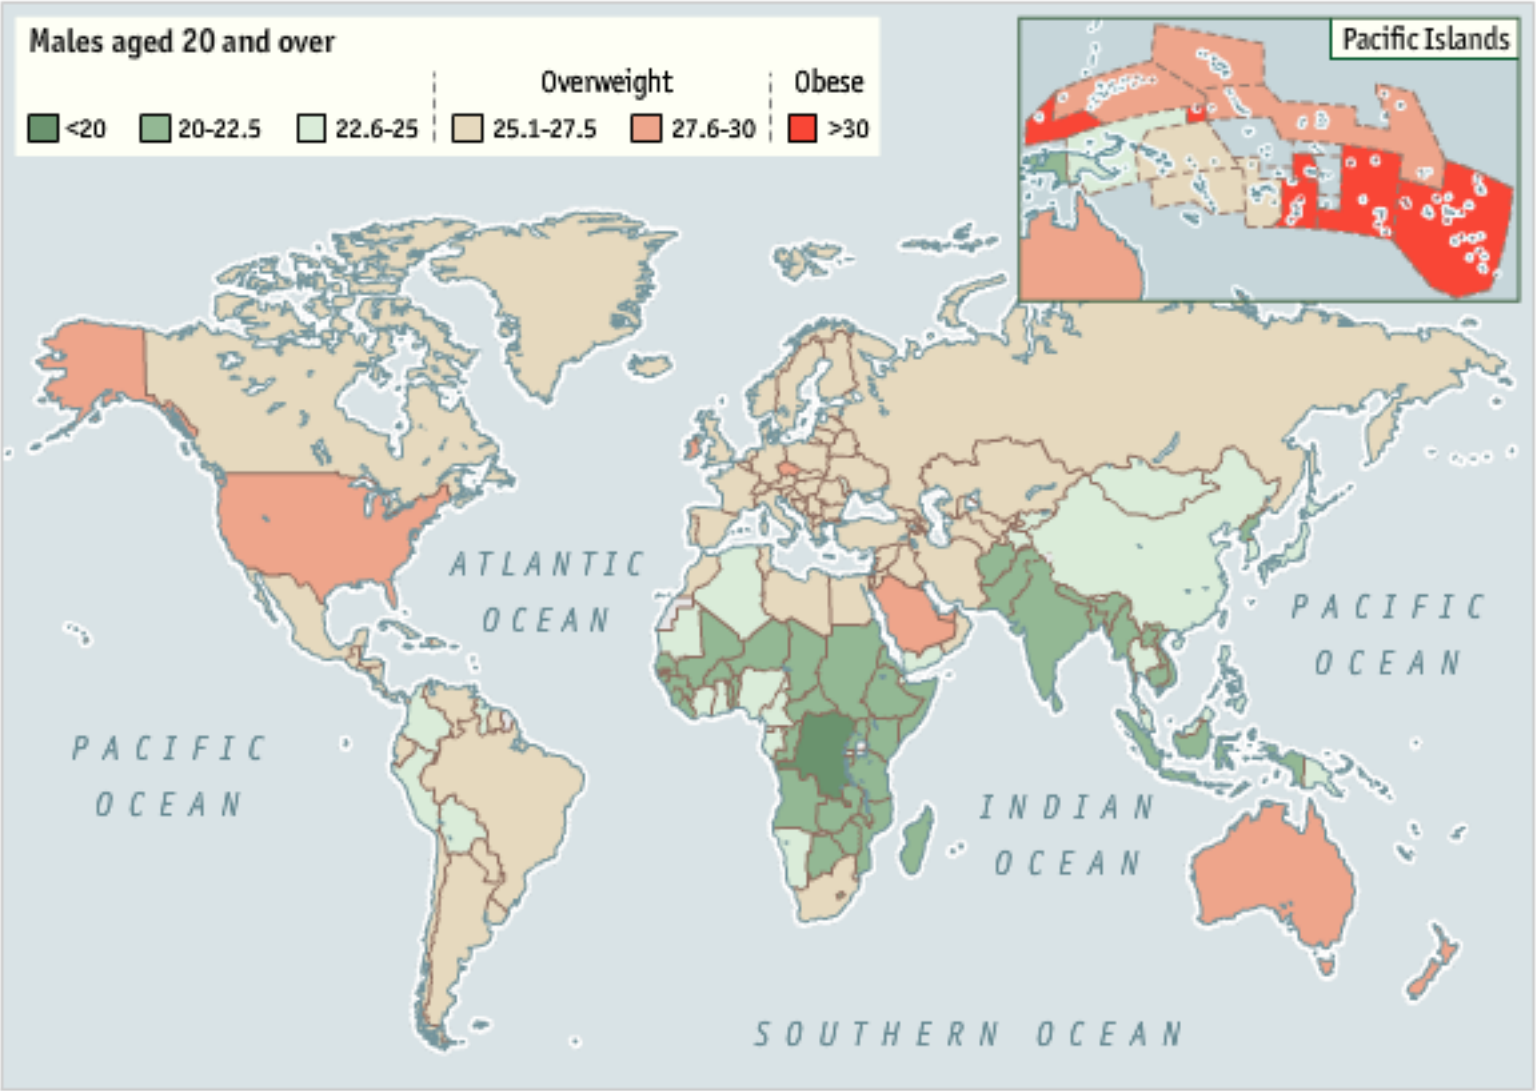

4th

Leading risk factor for global
mortality

A PROBLEM OF THE DEVELOPED WORLD

REACHING THE DEVELOPING WORLD

Chronic diseases in developing countries Growing pains

Poor countries are developing the diseases of the rich, with lethal consequences

Sep 24th 2011 | KAMPALA AND NEW YORK | from the print edition

Like 92

Tweet 0

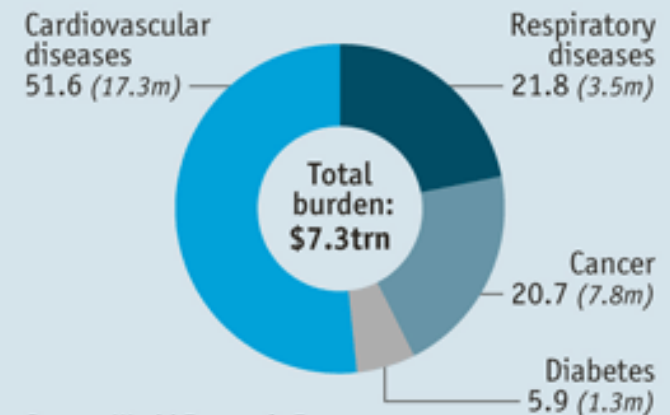

“Developing countries already bear more than 80% of the burden of chronic illnesses. Their share will grow—at a time when older diseases are still ravaging the poor.”

“The World Health Organisation expects deaths from non-communicable diseases to rise by 15% between 2010 and 2020, with jumps of over 20% in Africa and South-East Asia.”

“Even in sub-Saharan Africa, chronic illnesses are likely to surpass maternal, child and infectious diseases as the biggest killer by 2030.”

FILTER-BASED APPROACHES HAVE BEEN AROUND FOR 20 YEARS

But have their limitations

- ▶ **Frequency domain:** Artifacts in the frequency band of interest
- ▶ **Time domain:** Require detection of a fiducial point

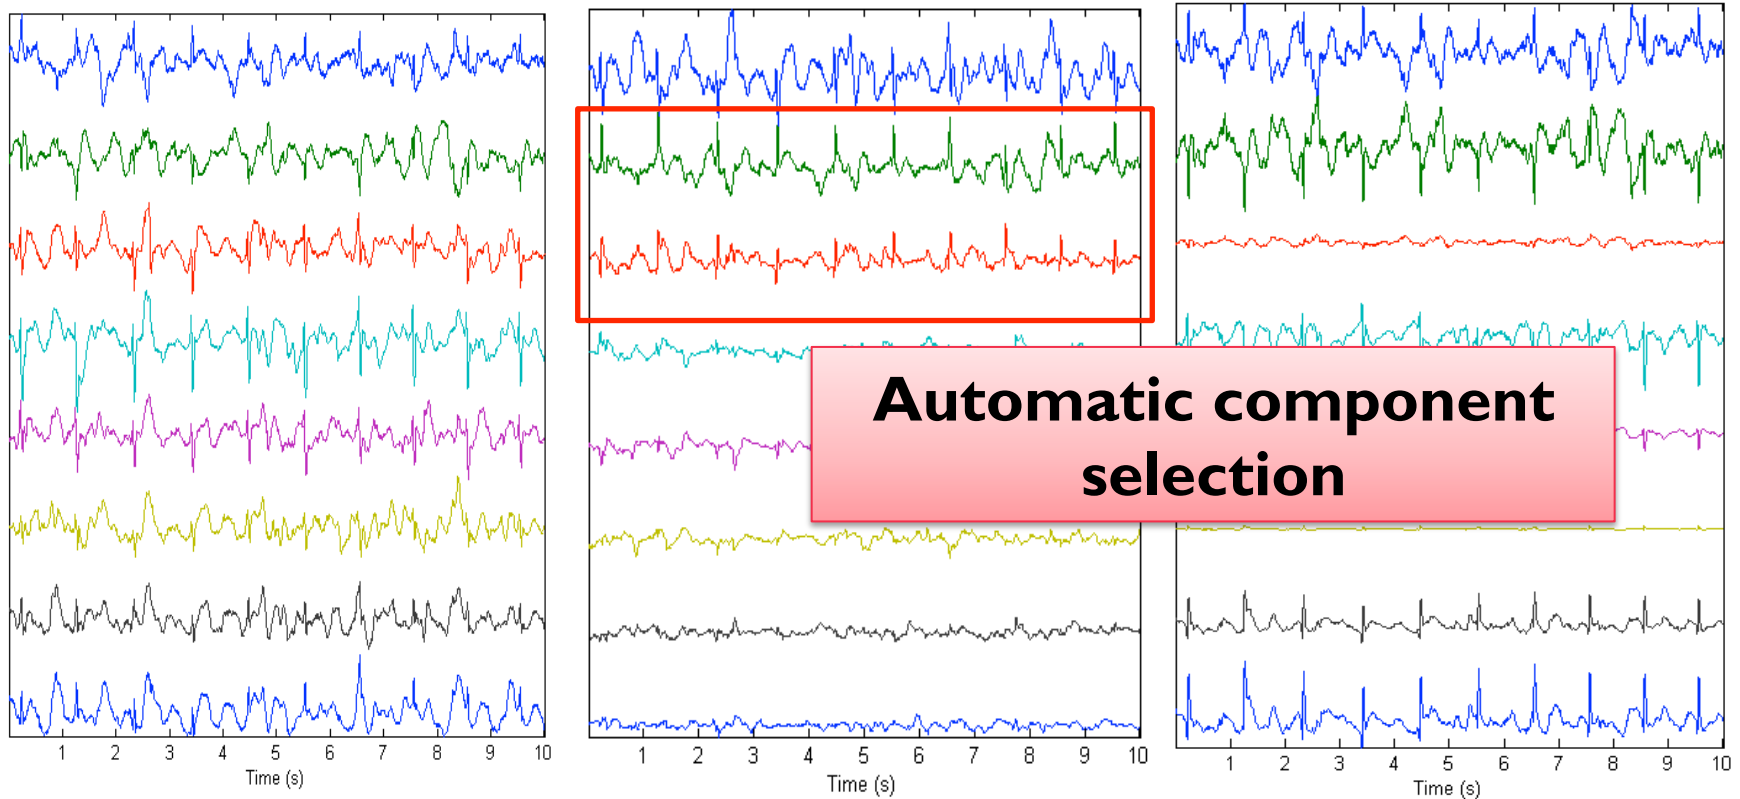

V. Afonso et al., *IEEE Engineering in Medicine and Biology Magazine*, vol. 15, pp. 37–44, 1996.

P. Augustyniak, in *Proc. of the WACBE World Congress on Bioengineering*, 2007.

BLIND SOURCE SEPARATION METHODS HAVE PROVEN SUCCESSFUL

Filtered ECG

BLIND SOURCE SEPARATION METHODS HAVE PROVEN SUCCESSFUL

Artifact
filtering

ADAPTIVE FILTERING TECHNIQUES REQUIRE AN ESTIMATION OF NOISE

The indirect approach: measure activity

- ▶ Accelerometers to reconstruct movement
- ▶ BUT overall body movement is not necessarily causing artifacts

A more direct way: measure skin stretch

- ▶ Optical or stress measurements
- ▶ Have shown good results in some cases

P. Hamilton et al, Biomedical Instrumentation & Technology, vol. 34, pp. 197–202, 2000.

P. Hamilton et al, Computers in Cardiology, vol. 27, 2000, pp. 383–386.

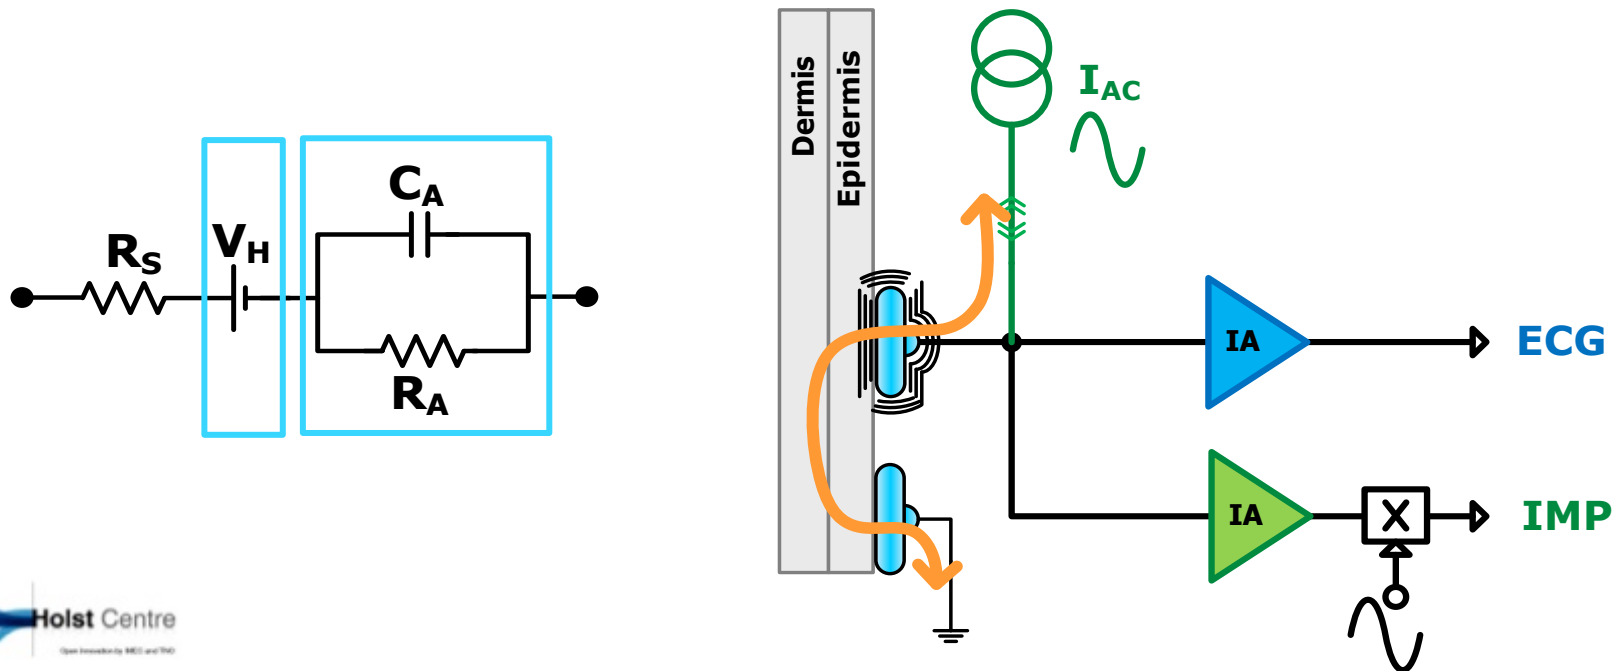

D. Tong et al, Proc. Second Joint EMBS/BMES Conference, vol. 2, 2002, pp. 1403–1404.

M. Raya et al, in Proc. Second Joint EMBS/BMES Conference, vol. 2, 2002, pp. 1756–1757

ADAPTIVE FILTERING TECHNIQUES REQUIRE AN ESTIMATION OF NOISE

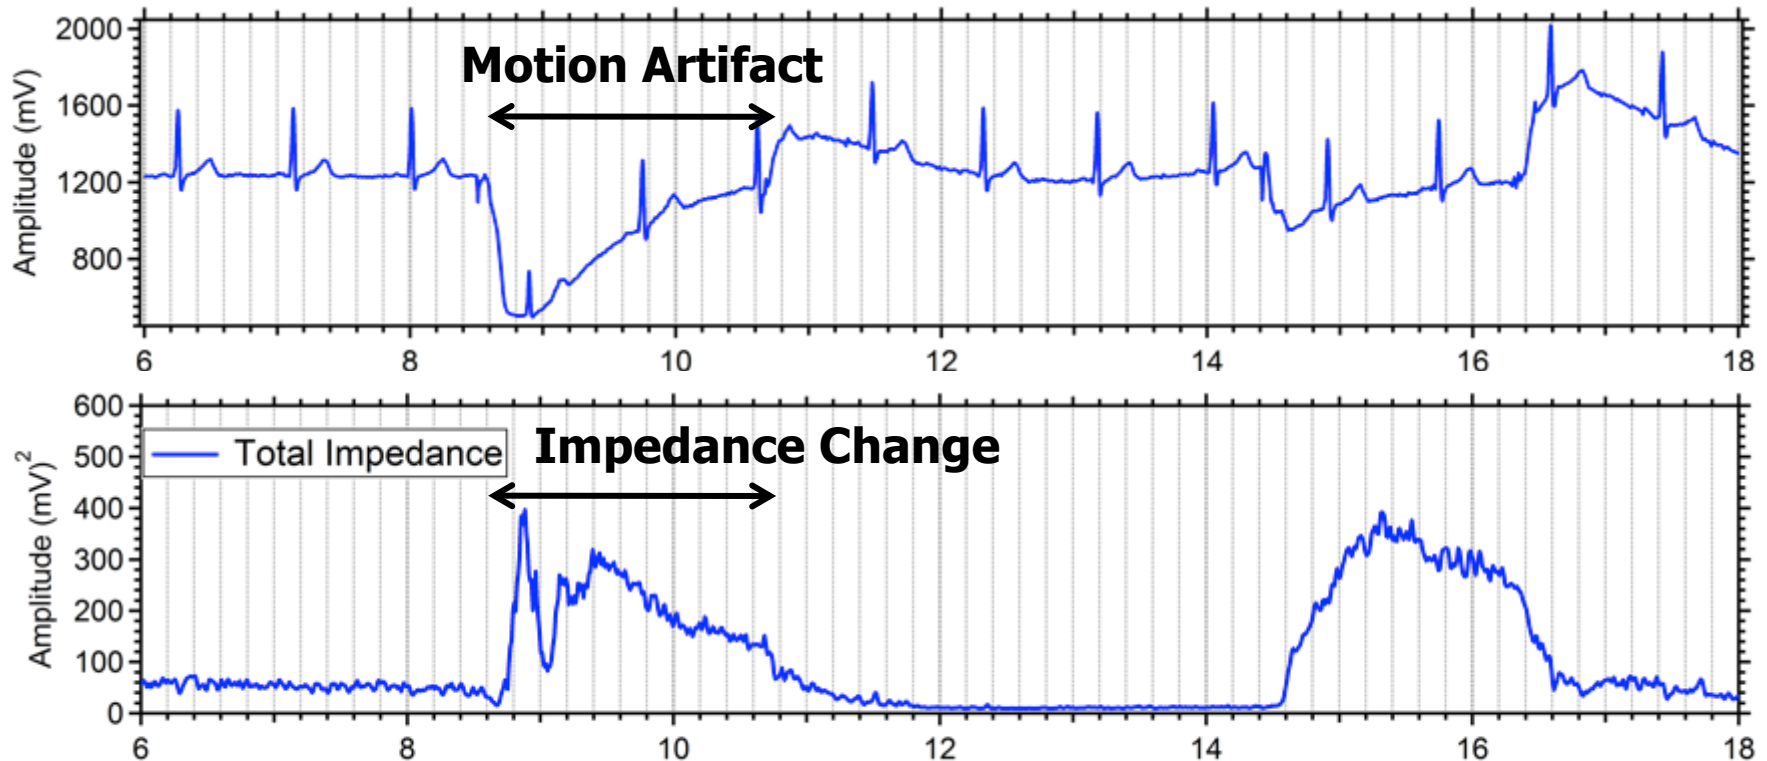

The **MOST** direct approach: measure the cause of the artifact

- ▶ Electrode-tissue impedance changes due to motion
- ▶ Measure in real-time this impedance to detect artifacts

ELECTRODE-TISSUE IMPEDANCE

Measure the artifact...

ELECTRODE-TISSUE IMPEDANCE

...And filter it out

CUSTOM ULTRA-LOW-POWER ANALOG READ-OUT ENABLING ARTIFACT FILTERING

Key functional features

- ▶ **3-channel ECG** recording
- ▶ **I-channel impedance** measurement

At ultra-low-power

- ▶ Power consumption: 40uW
- ▶ Low-supply voltage: 1.2V

**Integrated
in a Patch**

Clean ECG

health**

BCI FOR GAMING APPLICATIONS

Require comfort
and ease of use

BCI FOR MEDICAL APPLICATIONS

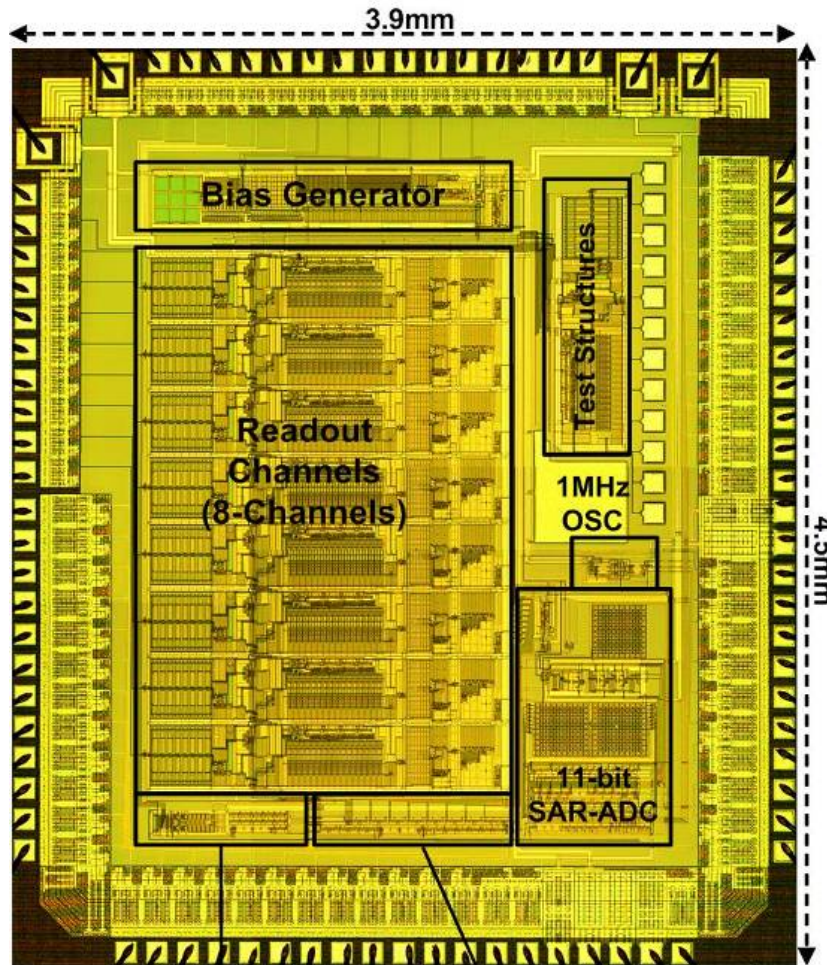

Require high quality EEG recording

**Can we achieve
COMFORT &
QUALITY
in EEG recording?**

ULTRA-LOW-POWER READ-OUT FOR MINIATURIZED LOW-NOISE SYSTEM

Impedance
Measurement &
Calibration Signal
Generator

Digital Circuit

Key Features

- ▶ 8 EEG Acquisition Channels
- ▶ Integrated 11-bit ADC
- ▶ Built-in impedance measurement mode

At ultra-low-power

- ▶ Total power dissipation: 200uW

DRY ELECTRODES ARE CRUCIAL

- ▶ Comfort & quality
- ▶ Easy (no skin prep)
- ▶ Clean (no gel)
- ▶ And Dirty cheap

BRAIN COMPUTER INTERFACES

**are changing the life of
paraplegic patients**

CONCLUSIONS

Health(care) is changing

- ▶ The patient of the future is a **healthy patient**
- ▶ The doctor of the future is a **manager of health**, assisted by millions of virtual assistants: wearable sensors

Enabled by game-changing technologies

- ▶ Ultra-efficient electronics for long term monitoring
- ▶ Algorithms & circuits for monitoring in free-living conditions
- ▶ New sensor paradigms
- ▶ Miniaturization and extreme integration ('wear & forget')

A vibrant purple, smoke-like graphic that flows from the top left towards the center of the page. It consists of multiple overlapping, translucent layers of purple, creating a sense of movement and depth. The smoke starts as a dense, swirling mass and then tapers into a thin, vertical trail as it descends.
